

HVAC Air Filter

Constructed of a durable cardboard frame, Greenlite's air filter has a pleated design that offers a large surface area which increases the filter's dust-holding capacity and improves its efficiency. It captures and traps microscopic allergens like pet dander, smoke, household dust, and large allergens like pollen and mold spores. Home air filters protect your HVAC system, but can be harmful if you don't change them regularly. For maximum performance, replace your air filter every 90 days to ensure you and your household are breathing cleaner air. Save money on energy bills when you replace your home air filter.
