

# H2-Whoa! Did You Know?

The **Thermostatic Shut-Off Valve** pauses hot water at 120°F — **saving water** and **preventing scalds**.

A **1.0 GPM Aerator** cuts faucet water use by over 50%, saving up to **7,000 gallons a year** — and installs in under a minute!

Switching to a **1.5 GPM Showerhead** can save up to 2,900 gallons of water per year for a typical household — that's enough to fill over **70 bathtubs!**

Cutting your shower to 5 minutes with a **Shower Timer** can save up to **12.5 gallons of water** every time you rinse off — that's like skipping the rinse cycle on 30 loads of laundry!
