Pipe Insulation

Reduce Heat Loss!

Our Polyethylene Hot-Water Pipe Insulation is used to insulate residential and commercial hot-water, non-seam pipes, providing improved thermal efficiency. Insulating hot-water pipes reduces heat loss and can raise water temperature 2°F-4°F. The insulation is flexible and is 100% pre-slit for easy installation.

WEATHERIZATION

Pipe Insulation

- Material: Closed Cell Polyolefin
- Color: Charcoal
- Low density
- Easy-to-apply
- Best for indoor applications such as radiant heat
- Best applications where temperature does not exceed 82°C or below -68°C
- Reduces Heat Loss and Freezing
- Reduces Condensation and Plumbing Noise
