

WATER CONSERVATION Accessories

Conserve water and save money

Shower timer

A shower timer helps you track how long you shower. Every time the sand runs out and you have to flip it over, another five minutes has passed. This helpful reminder encourages you to save energy and water by taking shorter showers.

Hot water gauge card

A hot water gauge determines when your water is too hot. It helps prevent scalding from hot water from water sources such as baths and showers. No batteries required - simply dip the card into a cup of water you are testing!

WATER CONSERVATION Accessories

Hot water gauge card

In most homes, the temperature water tanks are set to tends to be higher than what would be necessary. It is typically set to 140 degrees Fahrenheit, when 120 degrees Fahrenheit is suitable. This water temperature card allows you to see whether or not the proper settings are in place.
