

WATER CONSERVATION Accessories

Conserve water and save money

Shower timer

A shower timer helps you track how long you shower. Every time the sand runs out and you have to flip it over, another five minutes has passed. This helpful reminder encourages you to save energy and water by taking shorter showers.

Bathroom and kitchen faucet aerators

Faucet aerators are compatible with most faucets and save the amount of water you use without limiting the pressure. Faucet aerators can reduce the amount of water you use, which saves on your energy bill too.
