

WATER CONSERVATION Showerheads

Conserve Water and Save Money

Showerhead

High-efficiency showerheads use on average less than half the water of a standard showerhead while maintaining a powerful flow. This saves both water and the energy used to heat water.

Shower start valve

A shower start valve is specially designed to detect when your shower's water reaches the right temperature and automatically shuts off the water until you restart the water flow. You can save energy and water while still enjoying a perfectly warm shower that's ready when you are.

WATER CONSERVATION

Low Flow Hand Held Showerhead

- 1.5GPM Low Flow Hand Held Shower Head with 3 Functions
- Equipped with Rubber Washers
- High Gloss White Finish
- Meet ANSI/ASME A12.18.1M standards
